THE MOST ADVANCED EYEWEAR

PHOTOCHROMIC
POLARIZATION
SPECTRAL CONTROL®

PHOTOCHROMIC TECHNOLOGY

ADAPT TO LIGHT

WHETHER CROSSING SUN-SCORCHED DESERT VALLEYS OR WINDING MOUNTAIN ROADS, SERENGETI® LENSES PERFECTLY ADAPT TO CHANGING LIGHT CONDITIONS.

As the pioneer of Photochromic technology Serengeti leads the industry in creating lenses that adapt to any light condition in any setting. Darkening in bright sunlight and lightening in overcast conditions, Photochromic technology allows your eyes to adapt to any light, in any weather. The result is a view of the world so crystal clear, you'll notice natural beauty you've never seen before.

REACT TO UV LIGHT

Serengeti® photochromic lenses are activated by the amount of UV radiation in the atmosphere and engineered to transition from light to dark, gradually. Keeping your eyes and mind relaxed, and focused on the road ahead.

ADAPT TO ALL LIGHT CONDITIONS

Energy from UV radiation causes the polarity of the silver salt lens molecules to expand in brighter conditions, creating a denser lens that absorbs more light. In darker conditions, the molecules compress and separate to allow in more light.

ENHANCE YOUR VISION

Our photochromic lenses optimize for the environment, providing your eyes with the exact amount of light needed at any time—enabling your eyes to discern shapes and colors more quickly while eliminating eyestrain.

OPTIMIZE BLUE LIGHT TRANSMISSION
Serengeti® Spectral Control® technology excels at diminishing atmospheric haze, filtering up to 96% of blue light to reduce blue blur and visible noise, while enhancing contrast and sharpness.

ENHANCE A NATURAL COLOR BALANCE
Our lenses selectively manage light wavelengths, distinguishing reds, greens and yellows, in any light condition. Providing improved depth perception and maximum color contrast.

PROTECT YOUR EYES FROM AGING
While some blue light (blue turquoise) regulates our biological clock, retina-harming blue-violet light is a risk factor for age-related macular degeneration (AMD). By filtering it out, our Spectral Control technology helps preserve your sight perfectly.

SPECTRAL CONTROL®/TECHNOLOGY

MANAGE THE LIGHT

SERENGETI® SPECTRAL CONTROL TECHNOLOGY FINE-TUNES THE LIGHT WAVES PASSING THROUGH THE LENS, FOR NATURALLY ENHANCED DETAIL. AND COLORS THAT POP, CRISP AND CLEAR.

Our Spectral Control technology removes wavelengths to give better saturation of what we need to see. Much like an audio equalizer filters sound frequency, our lens fine-tunes and filters shortwave blue light, allowing more red, green, and yellow to pass through. Landscapes that would be washed out, dull, or flat with other lenses become defined, vibrant, and vivid. Traffic signs and signals appear more distinguishable—while your eyes remain cool and relaxed.

POLARIZATION / TECHNOLOGY

CONTROL THE LIGHT

WHETHER YOU'RE IN A HIGH- OR LOW-GLARE ENVIRONMENT, YOU DESERVE LENSES THAT GIVE YOU THE ULTIMATE GLARE PROTECTION AND WITH IT, UNCOMPROMISED CLARITY.

A headache from glare can ruin your day. With Serengeti® Polarization technology, it becomes a thing of the past. When glare reflects off the road, water, snow or flat areas, parallel light rays can pass through unhindered, while distracting perpendicular light is reflected. This allows you to discover more clarity, while living free from glare and eye fatigue.

*The technology in our Pilot Collection is specifically designed for those who professionally take to the skies, and features non-polarized lens options for pilots flying aircraft with digital instrument panels.

ATTAIN THE VENETIAN BLIND EFFECT
When glare strikes, embedded Serengeti® Polarization technology acts like a Venetian blind. While parallel light rays enter each lens, distracting perpendicular rays are reflected.

ABSORB ALL FOUR TYPES OF GLARE
Serengeti polarized lenses relieve eye fatigue and impeded vision by eliminating disruptive glare from: vehicle headlights, intense lights, shiny surface reflections and the everyday outdoors.

DISCOVER BELOW THE SURFACE
This Polarization technology allows you to experience absolute clarity, while discovering layer upon layer of details that glare would have otherwise kept hidden.

ULTRA-LIGHT MINERAL LENS

EXPERIENCE THE MOST OPTICALLY SUPERIOR LENS ON THE MARKET

Our mineral lenses begin with borosilicate optical glass from Corning,® which can withstand extreme temperature changes, allowing you the best visual acuity you could ever experience. An anti-reflective coating is added to the backside of the lens, canceling the scattering light that causes reflective glare. Plus, the lenses are chemically tempered to ensure scratch and impact resistance, then ground to perfection.

Every pair of Serengeti® mineral lenses is unique and comes to life through an intense hydrogen-firing process. Staying true to Serengeti's commitment to craftsmanship, we always give unparalleled attention to detail throughout every phase of the lens-making process.

MODEL // LIVIO 8683

LIGHTER. THINNER. BETTER THAN THE REST.

A full 20% thinner and lighter, our Borosilicate mineral glass lenses are finer than any other lens. Produced in the same process normally reserved for ophthalmic-quality corrective lenses, they also provide the best visual optics in the industry.

HYDROGEN-FIRED. INFUSED. PERFECTED.

Each photochromic lens passes through a hydrogen-fueled Lehr furnace, which fuses each lens with the Spectral Control® technology—with varying temperatures that determine the proprietary lens hue.

POLAR PhD™ 2.0 TRIVEX® LENS

OUR POLAR PHD 2.0 LENS OFFERS STUNNING VISUAL ACUITY AND THE HIGHEST LEVEL OF UV PROTECTION

Trivex lenses are composed of a urethane-based monomer and are made from a cast molding process similar to how regular plastic lenses are made. This gives Trivex lenses the advantage of crisper optics than injection-molded polycarbonate lenses (PC Abbe number: 29–31 vs Trivex Abbe number: 43–45). In addition, our lens features the Photochromic, Spectral Control® and Polarization technologies you're used to, with all-new benefits like a lower temperature sensitivity for high photochromic performance in any climate, which allows the lenses to darken faster and deeper in hotter environments. We also added a renewable backside anti-fog treatment to prevent fog on the lenses, like you experience when exiting a car's air conditioning.

MODEL // PONZA 8616

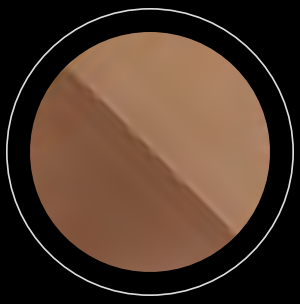
BALANCE. PERFORMANCE. CLARITY.

Each lens is built with NXT® technology and made from Trivex material, which was designed to withstand extreme impact and temperature changes. Lighter than polycarbonate, Trivex offers higher optical clarity and the perfect balance of visual and physical performance.

NO DUST. NO FINGERPRINTS. NO FOG.

The PhD 2.0 next generation lenses still feature hydro- and oleophobic front-side coatings, which help repel water, fingerprints, and debris. While a new highly durable backside anti-fog treatment enables perfect vision and better performance, whatever the activity.

LENS TEC



DRIVERS®

Launched in 1985, this ideal driving sunglass is the original and emblematic lens of Serengeti® The amber-colored Drivers lens naturally amplifies contrast and definition. It's engineered to transmit and distinguish red, green, and yellow colors, so they pop in all environments. This lens provides technicolor sensations of warmth and is ideal for driving because it enhances both colors and contrast, while lightening and darkening to provide optimal light transmission in any condition. Overcast to medium light conditions: Driving, Golf, Onshore, Fresh Water. Available in non-polarized and polarized ultra-light mineral and Polar PhD™ 2.0 lenses.

NON-POLARIZED MINERAL (CATEGORY 2 TO 3)

23%	Transmittance lightened lens	89%	Blue light blocked lightened lens
12%	Transmittance darkened lens	95%	Blue light blocked darkened lens

POLARIZED MINERAL (CATEGORY 2 TO 3)

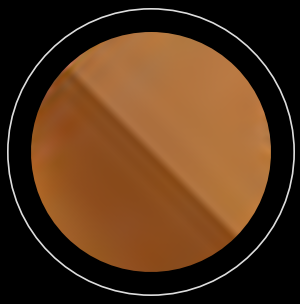
9%	Transmittance darkened lens	96%	Blue light blocked darkened lens



DRIVERS GOLD

This lens has all the benefits of our signature Drivers lens, along with a stylish gold-flash mirror. The amber-colored Drivers Gold mirrored lens provides an additional layer of protection, amplifying contrast and definition to reveal vibrant colors in all environments. The gold mirror is particularly helpful in brighter driving conditions. Available in polarized ultra-light mineral and Polar PhD 2.0 lenses.

POLARIZED MINERAL (CATEGORY 3)

POLAR PHD 2.0 (CATEGORY 2 TO 3)

18%	Transmittance lightened lens	92%	Blue light blocked lightened lens
8%	Transmittance darkened lens	96%	Blue light blocked darkened lens

DRIVERS GRADIENT

Our Gradient Drivers lens was invented to help both pilots and drivers to read their instruments and see the world in perfect clarity. This lens is darker at the top and lighter at the bottom. Protecting your eyes from above while providing a clear view of the dashboard below. For pilots, our non-polarized Drivers Gradient finish is the preferred choice—capturing details at great distances without obscuring their view of the digital instruments in front of them. Overcast to medium light conditions: Driving, Flying, Onshore, Fresh Water. Available in polarized and non-polarized ultra-light mineral lenses.

NON-POLARIZED MINERAL (CATEGORY 2 TO 3)

26%	Transmittance lightened lens	87%	Blue light blocked lightened lens

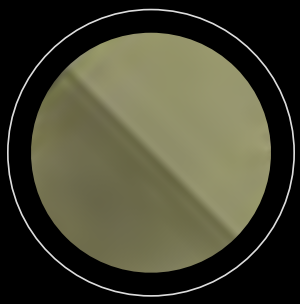
13%	Transmittance darkened lens	93%	Blue light blocked darkened lens



555nm®

555 nanometers marks the center of light's visible color spectrum, right on the border of yellow and green. This is where the human eye sees best. That's why our 555nm lens was created specifically for optimal sight in bright climates. In low light conditions, this lens allows more yellow and green to pass through, creating relaxing conditions for the eyes. Because the brain can recognize these two colors most easily, yellow is widely used on caution signs while green on black are used on radar screens, night vision devices, LED displays and DVD players. Very bright light conditions—Ocean, Driving, and Everyday. Available in non-polarized and polarized ultra-light mineral and Polar PhD 2.0 lenses.

NON-POLARIZED MINERAL (CATEGORY 3)

16%	Transmittance lightened lens	89%	Blue light blocked lightened lens

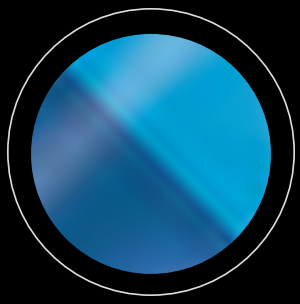
*MINERAL LENS ONLY

HNOLOGY



555nm® BLUE

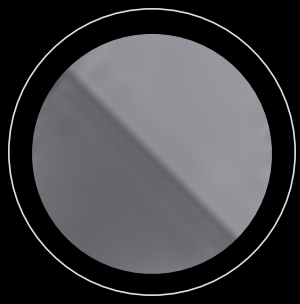
As a beautiful variation of the 555nm, the 555nm Blue features a reflective blue dielectric mirror coating, which offers a category 2 to 3 555nm lens protection that reflects more glare and improves contrast. Available in polarized ultra-light mineral and Polar PhD™ 2.0 lenses.

POLARIZED MINERAL (CATEGORY 2 TO 3)

25%	Transmittance lightened lens	89%	Blue light blocked lightened lens
16%	Transmittance darkened lens	93%	Blue light blocked darkened lens

POLAR PHD 2.0 (CATEGORY 2 TO 3)

19%	Transmittance lightened lens	90%	Blue light blocked lightened lens
8%	Transmittance darkened lens	94%	Blue light blocked darkened lens



CPG

Our CPG (Cool Photo Gray) is a multiuse lens designed to reduce harsh glare in all weather conditions without any artificial color enhancement. Its Polarization also further protects and comforts your eyes. Available in Polar PhD 2.0 lenses.

POLAR PHD 2.0 (CATEGORY 2 TO 3)

22%	Transmittance lightened lens	83%	Blue light blocked lightened lens
9%	Transmittance darkened lens	91%	Blue light blocked darkened lens

SEDONA®

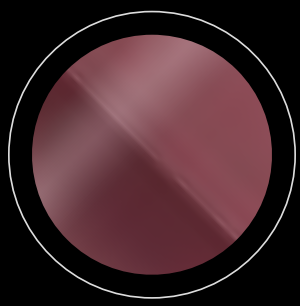
A high-contrast rose-colored lens with a silver mirror, the Sedona lens reduces glare from flat light and provides superior image definition. Best for bright conditions, which makes it ideal for skiing, golf, marine use, and other intense-sunlight activities. Available in polarized ultra-light mineral and Polar PhD 2.0 lenses.

POLARIZED MINERAL (CATEGORY 3)

16%	Transmittance lightened lens	90%	Blue light blocked lightened lens
9%	Transmittance darkened lens	94%	Blue light blocked darkened lens

POLAR PHD 2.0 (CATEGORY 3)

14%	Transmittance lightened lens	90%	Blue light blocked lightened lens
8%	Transmittance darkened lens	93%	Blue light blocked darkened lens



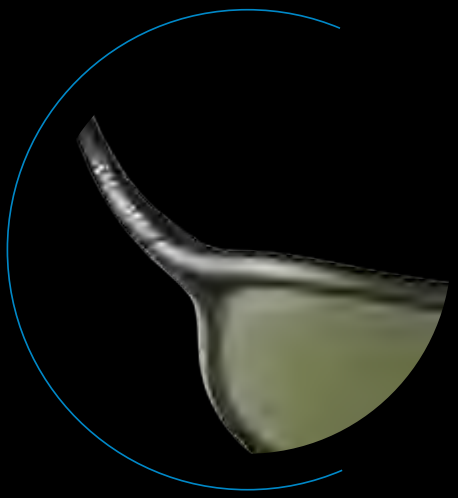
SEDONA BI-MIRROR

The stylish silver-flash bi-mirror on this variation of the Sedona provides your eyes with ample protection on the top, and below, producting beautiful clarity in the middle. This increased protection allows you to see details when looking close-up, making these lenses aesthetically pleasing and functional. Blocks glare from above (sun) and below (water). Ideal for golf and boating activities. Available in polarized ultra-light glass lenses.

POLARIZED MINERAL (CATEGORY 3)

16%	Transmittance lightened lens	91%	Blue light blocked lightened lens
10%	Transmittance darkened lens	94%	Blue light blocked darkened lens

FRAME MATERIALS / FEATURES

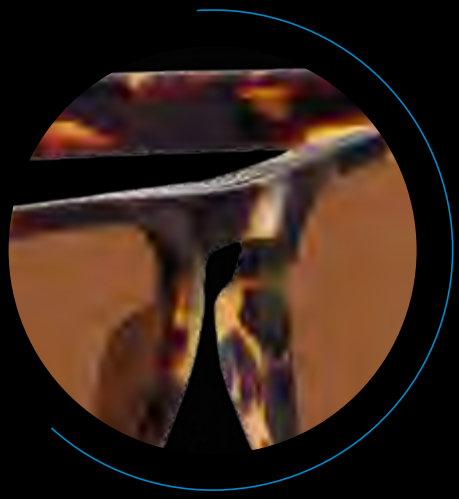


NYLON TR90

Using only the highest-quality injected Nylon TR90 for superior durability, these fashionable frames have the added benefit of being exceptionally light, chemically resistant, and extremely flexible and comfortable. Nylon TR90 is featured within styles in the Classic, Premium, and Sport Nylon Series.

ACETATE

Expertly produced and cured from all-natural cotton, our Cellulose Propionate Acetate is not only handcrafted to be lightweight, but can be made into beautiful patterns and brilliant hues. Pliable when heated, it is ideal for custom fitting. Featured in the Acetate Series.

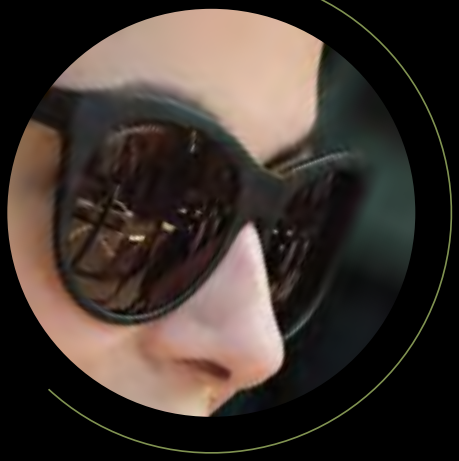


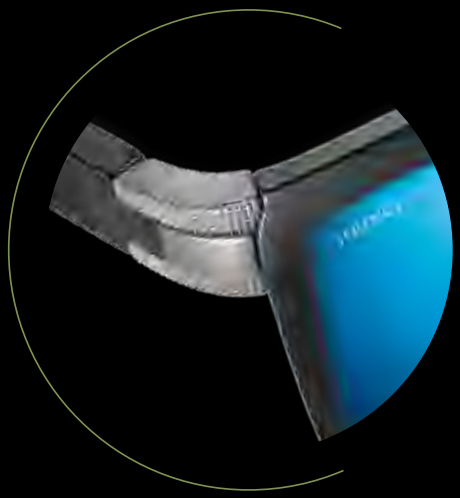
TITANIUM

Titanium is lightweight, strong, corrosion-resistant, and highly flexible. It's ideal for use in thinly designed temples—as it expands the fit range of the sunglass. Titanium is featured in styles of the Premium Metal and Premium Nylon Series.

UNIVERSAL FIT

Select Serengeti® styles feature Universal Fit, which is a frame technology we've exclusively designed to fit a wide variety of head sizes and facial features.





SIGNATURE HINGE

Our most innovative hinge features lost-wax casting, an intricate method of craftsmanship used in the making of fine jewelry and art. This process requires the use of the finest metals and alloys. The Signature Hinge is beautifully crafted of copper beryllium and engineered with screws that are exceptionally strong and secure. Available in the Signature Collection.

WIRE FLEX

Designed for comfort that feels truly customized, Wire Flex bends to the contours of the face. It features a flexible and strong blend of nickel, silver, and stainless steel. Available in the Flex Collection.

ADJUSTABLE NOSE PADS AND TEMPLE TIPS

On select models, the nose pads can be adjusted to fit each individual nose bridge comfortably while adjustable temple tips allow for a snug fit behind the ears. Megol nose pads and temple tips absorb moisture, keeping frames securely in place. Silicone nose pads can be adjustable for a comfort. And each Acetate temple is pliable when warmed, allowing for a more customized fit.

SUN RX PROGRAM

VARIO DRIVE THIN DESIGN

The ultimate in lightweight lens technology, Serengeti®'s VARIO Drive Thin Design represents the culmination of the most cutting-edge advancements available in the optical industry. Photochromic and Spectral Control® technologies in every lens let you discover infinite colors in any light condition with stunning visual clarity, and the optional Polarization technology eliminates surface glare.

HOW DOES VARIO DRIVE THIN DESIGN TECHNOLOGY WORK?

Software using the most advanced calculations is used to create customized lenses and the ultimate in lightweight products. Every prescription is reassessed to compensate for optical distortions related to the frame wrap angle. When the prescription reaches the limits of the conventional digital surfacing method, our patented algorithm calculates the best lens geometry regarding the Optical Area and the Transition Zone, and reduces the Edge Thickness (US Patent number 8,002,404). Every product is customized to the prescription, frame, and wearer's facial metrics.

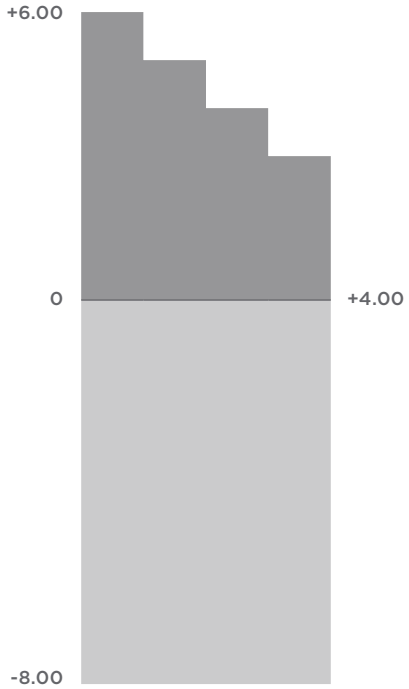
TRIVEX® LENS PRESCRIPTION RANGE



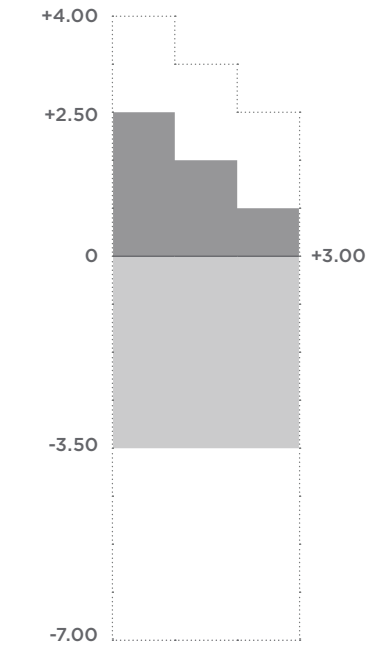
TRIVEX LENS

Built with NXT® technology and Trivex material, VARIO Drive lenses are the perfect balance of visual and physical performance. Highly durable, they are also up to 72% thinner and 45% lighter than conventional prescription lenses.

AN UNPARALLELED RANGE OF PRESCRIPTION POWER

- +6.00 to –8.00* (Cyl +4.00) for the Serengeti® sunglasses range, 99% of prescriptions in Single Vision and Progressive lenses.
- Digital surfacing technology combines advanced customization with patented wrap optics experience, excellent for competitive sports.
- Abbe value equal to 45, as opposed to 32 for polycarbonate.
  - 10% lighter than polycarbonate
  - 15% lighter than CR-39 and 75% lighter than mineral
- Backside anti-reflection available on every lens.

MINERAL LENS PRESCRIPTION RANGE**



MINERAL LENS

Serengeti extends its Vario Drive technology to the mineral lenses and introduces the Progressive Digital Mineral lenses. The Single Vision range benefits from this technology and offers a wider range than conventional prescriptions, available on request from our RX Customer Service. Stunning visual definition. Unsurpassed comfort. Flawless quality. The technical features of Serengeti sunglasses are supplemented by the following special features for mineral lenses.

A LARGE RANGE OF PRESCRIPTION POWER

+2.50 to -3.50* (Cyl +3.00) for the Serengeti sunglasses range. To keep the best look, we have chosen the best selection of frames compatible with mineral lenses. Each frame has its own prescription range. Please refer to the website for further details.

- Exceptional optical high-definition.
- Base 6 and 8 corrective technology, accommodating a wide range of prescriptions.
- Backside anti-reflection coating on every lens.

FOR A COMPLETE LIST OF AVAILABLE PRESCRIPTION LENS OPTIONS FOR EACH FRAME, PLEASE REFER TO PAGE 66.

1

FRAME MODEL AND COLOR SELECTION

Thanks to a wide selection of frames and lenses available on our website, you can customize your own Serengeti® RX as you wish. All the frames available in prescriptions are designated throughout the catalog.

2

LENS SELECTION

We offer many options when it comes to choosing a lens—making sure you end up with a pair of Serengeti sunglasses that is perfect for you.

- Single Vision or Progressive
- Trivex® or Mineral
- Polarized or Non-Polarized lenses
- Various Lens Shades

A SALES TOOL CRAFTED FOR THE EXPERTS

Our revolutionary website is a true partner when it comes to sales—enabling you to assess the suitability of prescription sunglasses in real-time, in front of your client. The website also allows you to make orders and track production right from your laptop. You can choose whether to show the recommended retail prices and even manage your after-sales service.

PROGRESSIVE LENSES

Progressive lenses come in two designs to adjust as closely as possible to the way the wearer uses them.

DYNAMIC

Progressive lenses offer an enhanced field of view for long distances. Corridor and close ranges have more restricted vision.

RECOMMENDED FOR ACTIVE USE.

ALL-PURPOSE

Multi-purpose progressive lenses offer a wider field of vision over near and distant ranges.

RECOMMENDED FOR DAILY USE.

3

DETAILED 2D VIEW

We provide a detailed 2D view of the lenses you selected in your final order, to give you a better sense of how your new lenses will look.

SPORT NYLON SERIES

DYNAMIC, STYLISH, UNCOMPROMISING

Being uniquely sporty AND elegant, our Sport Nylon Collection is popular for a reason. Thanks to Nylon TR90 construction, each of the sleek frame designs is ultra-lightweight. While our Trivex® Polar PhD™ 2.0 lenses offer stunning visual acuity and the highest level of UV protection. In short: a superior combination of comfort and durability, style, and class.

Available in prescription lenses.

SUNGLASS WARRANTY

LIMITED WARRANTY

Serengeti® Eyewear warrants to the consumer that, for two years from the date of purchase, we will repair or replace, at our discretion, any Serengeti product that is defective in materials or workmanship. This warranty does not apply to products that have been lost, altered, broken or damaged by misuse or failure to follow instructions provided with the product. Serengeti Eyewear does not warrant against normal wear, including lens scratching or accidental frame breakage. For this warranty to apply, purchase must have been made from an authorized Serengeti dealer, and the client must have the proof of purchase. Only authentic Serengeti products will be warranted. All warranties that are implied by law are also limited for two years from the date of purchase. Contact your local dealer for applicable warranty information.

CARE AND USE

Warning: Serengeti lenses are scratch resistant, but not scratch proof. Taking a few precautions will ensure that they last for many years. To clean the lenses, blow loose particles off the lenses, then clean with an optical lens cloth. A mild liquid soap, without abrasive particles, may be used for cleaning the frames and lenses.

- Never use paper products to clean lenses.
- Since salt is highly abrasive, rinse lenses with fresh water if you have been in or near salt water.
- Do not place lenses face down on any surface.
- Never put your sunglasses loose in a pocket or purse where objects may damage lenses.
- Do not leave your sunglasses where conditions are intensely hot or cold (for example, on the dashboard of your car).
- Use only original parts. Replace if broken.

CAUTION This product is not suitable for driving in twilight or at night, not for use as eye protection against mechanical impact hazards, not for direct observation of the sun. It is not for protection against artificial light sources, e.g. solaria. Lenses meet Conn SGST40 and FDA impact requirements but are NOT SHATTERPROOF. All Serengeti products (with lenses of nominal plano power) are in compliance with European Directive EEC/89/686 in accordance with standard EN ISO 12312-1:2013 (sunglasses for general use). Recommendations for care and storage: rinse with fresh water, use a nonabrasive soap and clean with an optical lens cloth after rinsing.
